

medicina flexifeed enteral feeding bags

The Flexifeed bags are made of DEHP and BPA free plastic making them safe for use with any age patient.

The range of Flexifeed bags means that it is easy to pick a bag with a volume that suits different patient needs. The strong but flexible bags are designed to be easy to store, taking up to a third less space than conventional bottles.

Each bag contains only half as much plastic as it's semi-rigid or blow moulded equivalent, making it cheaper to produce. The reduced weight makes shipping less expensive and better for the environment on disposal.

medicina flexifeed enteral feeding bags

Medicina Flexifeed bags offer a space saving solution for delivering enteral feed to pump or gravity fed patients. The Flexifeed bags take up a third of the space of the equivalent blow moulded or semi-rigid containers, helping in areas where storage space is limited. The Flexifeed bags are more environmentally friendly because they use less raw materials and the production process is more energy efficient.

great space saving solution

Medicina Flexifeed bags offer a space saving solution for delivering enteral feed to pump or gravity fed patients.

The Flexifeed bags take up a third of the space of the equivalent blow moulded or semi-rigid containers, helping in areas where storage space is limited. The Flexifeed bags are more environmentally friendly because they use less raw materials and the production process is more energy efficient.

The Flexifeed bags come in three sizes all of which have a variable cap system which allows easy access for filling. The Flexifeed bag can be capped once filled,

or connected to an enteral feeding set.

The Flexifeed bags can be used with feeding sets from all the major manufacturers.

The smaller port allows access for pre-filled bag screw connectors.

The larger port allows access for bigger bottle adapter connectors.

“The Flexifeed bags take up a third of the space of the equivalent blow moulded or semi-rigid containers”

unique filling system

Users of the Flexifeed bag system will be provided with a free Flexifeed stand which allows the Flexifeed bags to be filled more easily. The strong brushed steel stands can support up to 3 bags at a time, making multiple feed production simple.

The neck of each bag is designed with a special groove that slots into the stand securing it. The cap can then be removed for filling. The stand allows the bags to be supported whilst they are being filled making it easier to fill them and include any additives without spillage.
